

XLine Module

XLine Module offers various optical combinations and modular designs. The integration of light sources and structures provides abundant convenience for the design and application of lighting fixtures.

Why XLine Module?

XLine Module has a unified standard installation interface and can be directly used on different luminaires or arranged separately in the required places

Installed as an indoor hanging luminaire or
Industrial wall-washing luminaire or
Outdoor wall-washing luminaire or
There are two installation methods: insertion and fixed
On ceiling it is used alone.
For wall-washing it is used alone

Customers can integrate multiple products of XLine Module into one luminaire for
Office hanging XLine Modules forming ambient lighting or for
Architectural lighting or for
Outdoor lighting
90-150W per meter, 200Lm/W

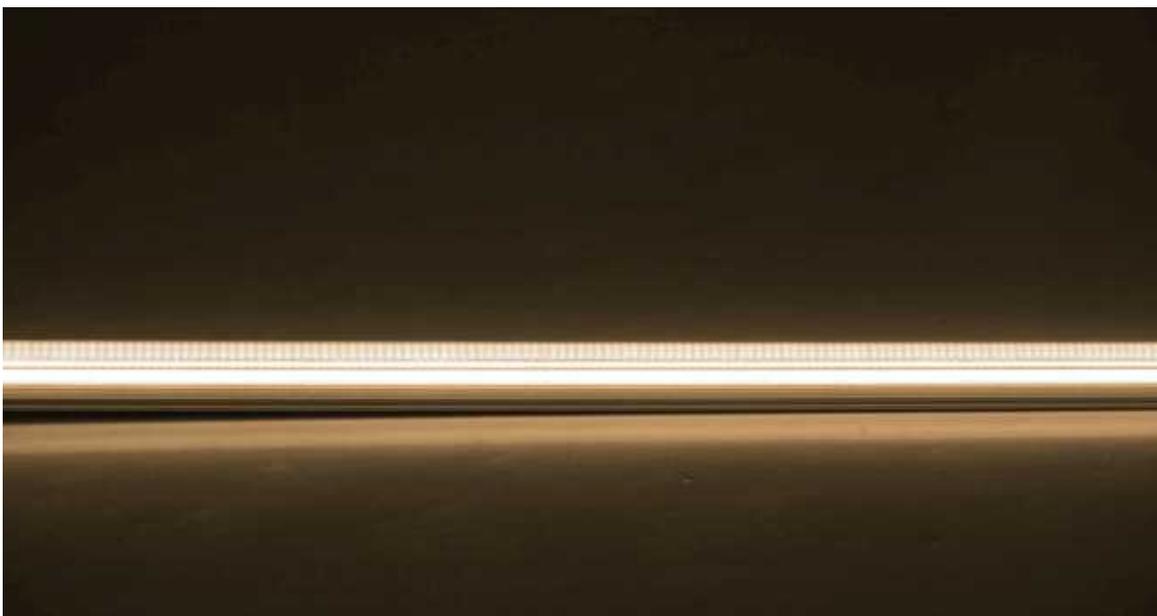

XLine Module

Traditional light modules are used as point light sources in spotlights, track lights, and ceiling lights. However, the emergence of XLine Modules has overturned this situation, upgrading point light sources to the current linear lights.

Not only, XLine Module Sources can serve as a module for general linear lighting fixtures, with different sizes and light angles. It can be used as an accessory without a secondary optical processing and has great flexibility in standardization. But also, it can be directly used as a linear lighting and applied to different scenarios.

XLine Modules offer various optical combinations and modular designs. The integration of light sources and structures provides abundant convenience for the design and application of linear lighting fixtures.

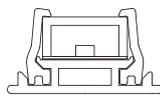

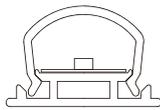

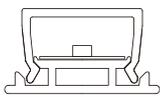

Length customizable

XLine Module Source is a unique product developed specifically for modular applications in linear lighting.

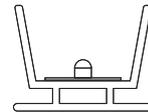

It can be combined with different optical components and light sources to achieve different optical & lighting effects.

It can be flexibly applied to linear lightings with input modes of DC24V and DC48V.

Non-Directional light

Directional light

XLine Module can be infinitely long

Users can first install the aluminum profiles, then the high-quality flex strips, and finally add the PC cover. The length can be achieved according to the user's requirements.

Combined with high-quality power supplies, the XLine Module can be extended to a maximum of 20m per power supply and is the best module for long-distance linear lights.

The XLine Module has different beam angles. The maximum beam angle is 170°, and there are also 150°/120°/100° designs. The directional XLine Module has 35°/50°.

XLine Module has both indoor and outdoor types

light source: Flex Strips

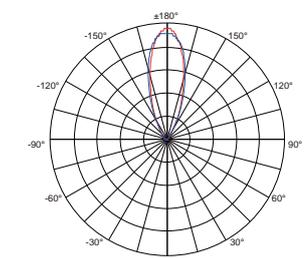

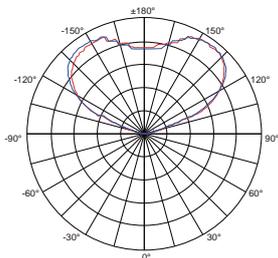

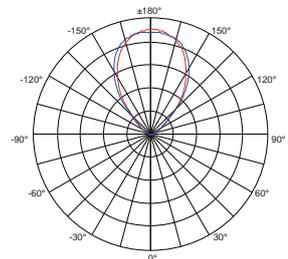

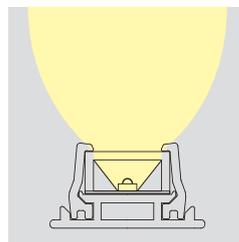

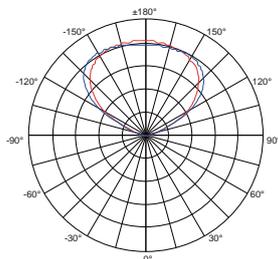

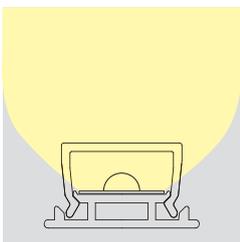

light source: Silicone Flex Strips

The maximum single strip indoors can reach 30W/m, 6500lm/m.
The outdoor ones can reach IP67, with a single strip capable of up to 30W/m and 6000lm/m.

XLine Module optical designs

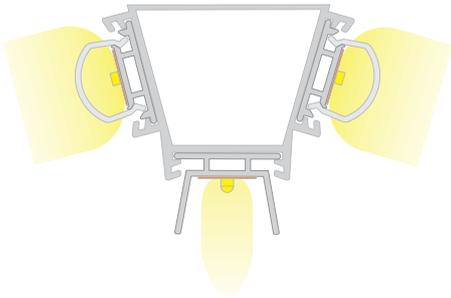

Provide different optical components to achieve different optical effects.

The XLine module has different beam angles. The maximum beam angle is 170°, and there are also 150°/120°/100° designs. The directional XLine module has 35°/50°.

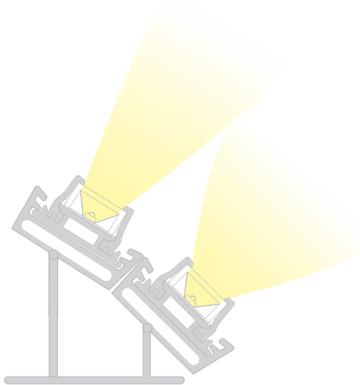

Pendant lamp for Office/ Hotel

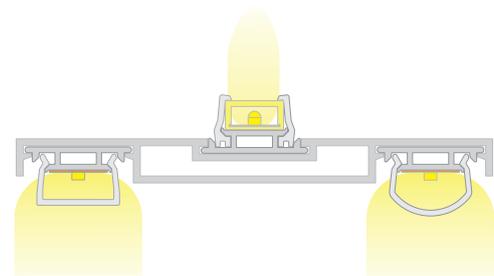

Linear for Super Market/ Warehouse

Linear for Industry

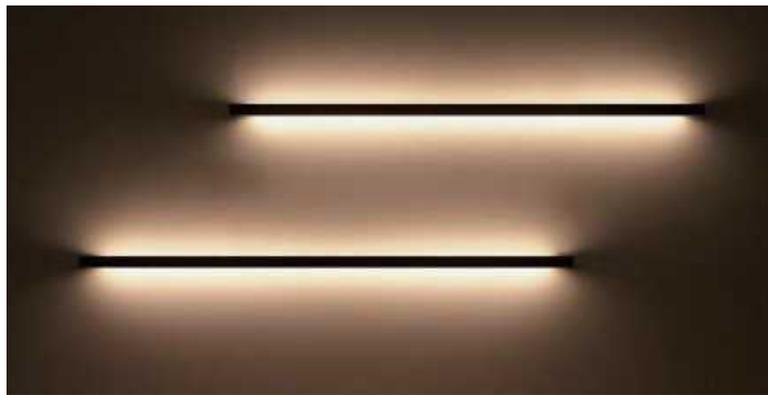

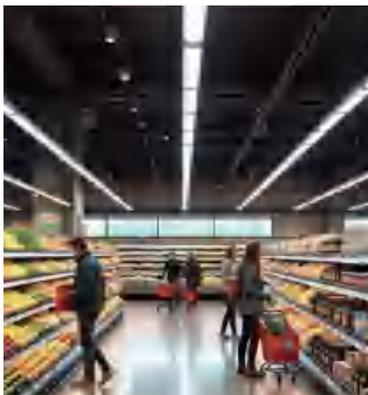

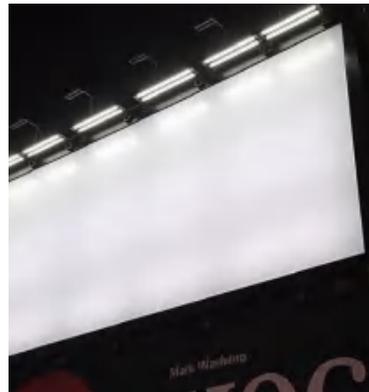

Outdoor wall washing

Architectural lighting

XLine Module breaks through the limitations of traditional light modules' point light emission, it unleashes infinite design possibilities, flexibly presenting its form based on requirements.

It offers a high sense of spatial three-dimensionality and layering, with high power: for example 30W/m, 20W/m, with a luminous efficacy of over 140lm/W(COB) or 210lm/W.

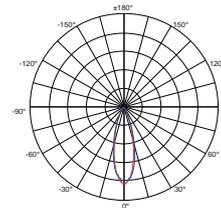

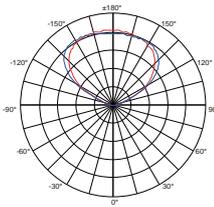

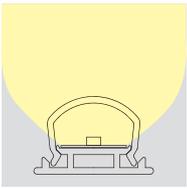

XLine Module has the following product types and applications

- 1) Indoor directional forward-illumination and wall washing for example at CRI97, R9>95, Rf>95, UGR<16;
- 2) Outdoor and industrial lighting, such as CRI80, 200Lm/w outdoor wall-washing and high bay lighting;
- 3) Indoor 180°-light-emitting panel light sources, such as advertising light boxes and soft film ceiling lights;
- 4) Office and educational lighting line luminaires;
- 5) Supermarket and store lighting;
- 6) Hotel and furniture lighting.

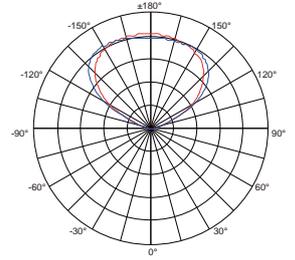

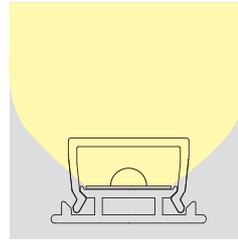

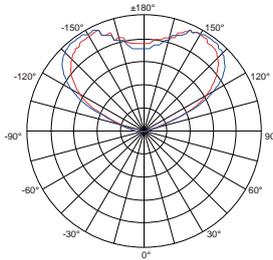

Office

Linear lighting is crucial for office lighting because it provides even and consistent illumination, making workspaces more comfortable. The design of linear lighting can perfectly adapt to various office layouts, such as rectangular rooms or large open work areas.

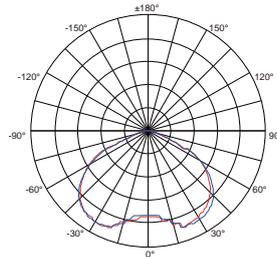

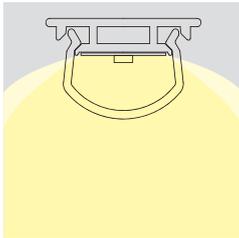

Hotel

Hotel lighting should be designed to make guests feel comfortable and welcome, creating a warm and inviting atmosphere. Using flex linear lighting in hotel design can add visual interest, highlight architectural features, and give a modern touch to the overall look.

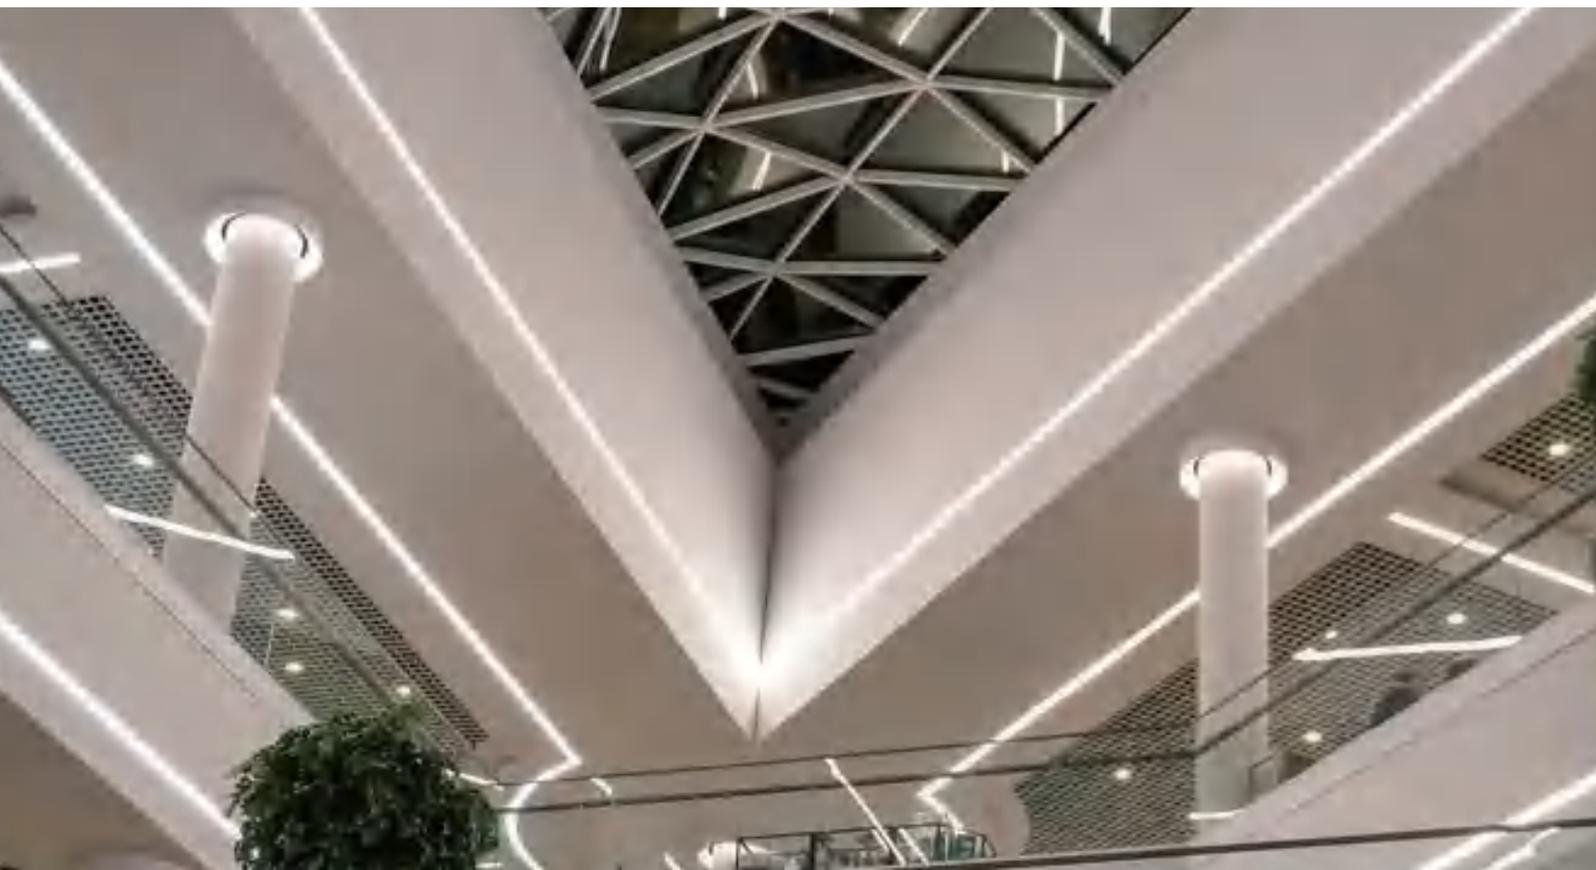

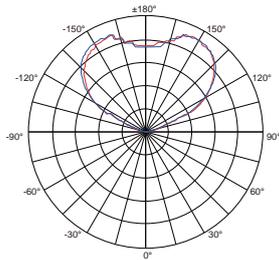

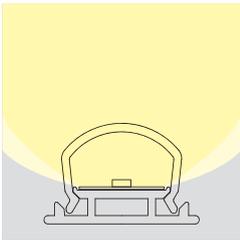

Restaurant

Restaurant lighting design should take into account both ambience and functionality. In general, warm and soft lighting is preferred over bright and harsh lighting. Meanwhile, lighting should provide adequate illumination for customers to comfortably read menus, see their food, and navigate the space.

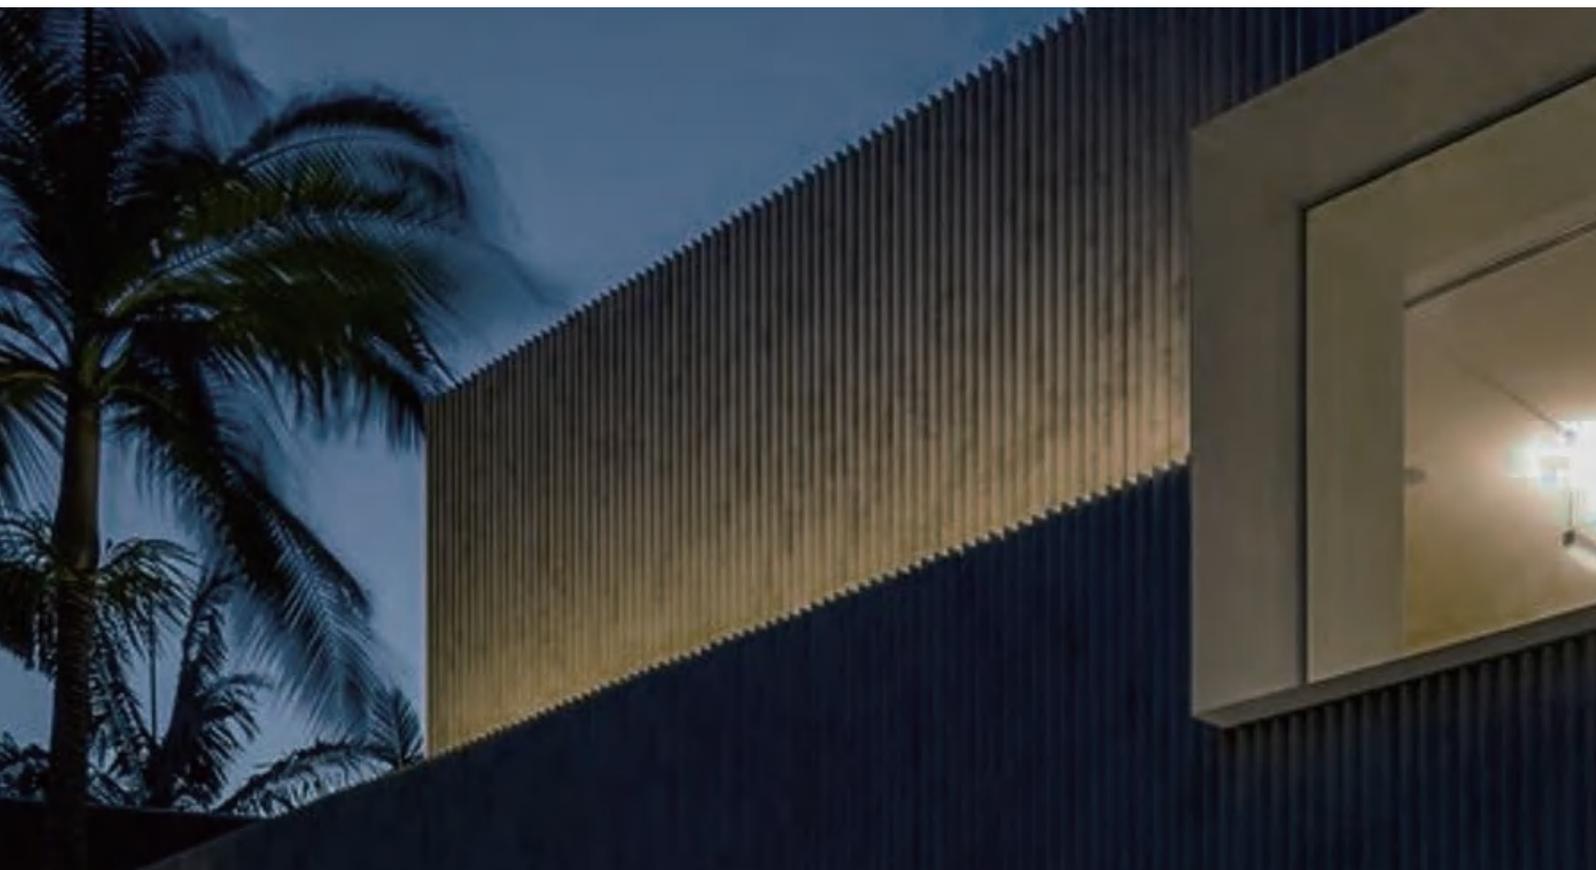

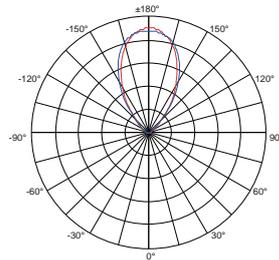

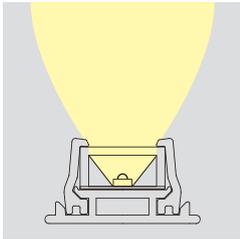

Shopping mall

Lighting in shopping mall should be designed to create a comfortable and inviting atmosphere for customers, while also complementing the architecture of the space.

Outdoor Lighting

Outdoor wall-washing lighting is a fusion of science and art - it uses precise light control to restore the true texture of buildings and conveys the emotional value of space through dynamic color language. Under the "people-oriented" urban lighting concept, excellent wall-washing design not only illuminates buildings but also awakens people's perception and love for the night environment, making every wall a "canvas of light and shadow" that tells the story of the city.

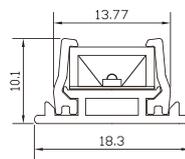

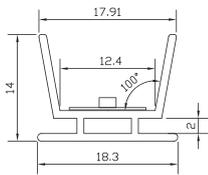

Aris XLine Module

Silicon Lens with LED together

- 1, Directional optical strip without adding any other lenses or optical processing;
- 2, With high illumination and high penetration 5-12 meters;
- 3, Lifespan up to 40,000 hours, 3 years warranty.

Artemi XLine Module

- 1, Patented design with 3D LED (5-surface & 270 deg. chip) & 150 deg. soft lighting & low UGR from its body lens (conventional lens stuck or injected is subject to easy peeling off, obvious light dot and high UGR);
- 2, Higher light efficiency for example 115Lm/w & brightness 2300Lm/m than usual COB strip 85Lm/w & 1000Lm/m;
- 3, No glare, no light dot like traditional SMD LED
